YOUR TEST RESULT

Dear

Thank you for sending us your fecal occult blood test (FOBT) to screen for colon cancer.

We have received the result and **are pleased to tell you that your test was normal/negative**. The lab has sent a copy of this result to the healthcare provider who ordered your test.

ColonCancerCheck recommends that people with a normal/negative result have another FOBT in two years. Unless you have instructed us otherwise, we will send a reminder at that time.

When caught early enough through regular screening, nine out of every 10 people with colon cancer can be cured.

Sincerely,

Dr. Linda Rabeneck
Vice-President, Prevention and Cancer Control
Cancer Care Ontario
